1. Claims 6 – 10 are allowed.
2. The following is an examiner's statement of reasons for allowance: applicant discloses a novel method of fabricating a CMOS image sensor which, in the context of the entire claim, coats a trench with a dyed photoresist and then performs an exposure and development operation to form a color filter and performs a thermal treatment to develop a convex shape in the color filter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art teaches methods of forming color filters and convex microlens in CMOS image sensors. In particular, Biebuyck *et al.* (US 6,337,381) teaches a method of forming an air bubble in an encapsulating film of an organic light emitting device, but does not discuss a color filter with a convex shape formed in a trench. Maegawa *et al.* (US 5,371,397) teaches method of forming a convex microlens with a thermal treatment, but does not discuss forming the convex shape in a color filter layer formed in a trench. Takemura *et al.* (US 4,721,999) teaches a method of forming a convex shape in a dyed photoresist color filter layer, but does not teach a thermal treatment or forming the color filter in a trench.
4. A copy of the IDS filed on October 17, 2003 was provided by fax since the page containing the PTO 1449 form was missing in the IFW scanned image.
5. A copy of the search history (EAST and STN) is enclosed.
